SITUATION
Mr. Case is a 58-year-old male who arrived at the ED via family vehicle at 8:27 am on 08/07/25 with a chief complaint of shortness of breath. He was triaged at 8:36 am as emergent priority 2 with vitals of BP 160/80, Pulse 110, Respirations 26, a temperature of 101.4°F and an oxygen saturation of 93% on room air. He has a history of COPD and hypertension and has been diagnosed with community-acquired pneumonia and also tested positive for C. difficile.

Initial labs show an elevated WBC count of 11.0, and a BMP and other stat labs have been collected. He is alert and oriented but appears anxious, using accessory muscles to breathe. Lung sounds are diminished with coarse rhonchi in the bases, and he has a productive cough with yellowish sputum. His GI assessment shows watery diarrhea and abdominal cramping. Vital signs were ordered to be monitored every 30 minutes, lab results pending, antibiotics started.

BACKGROUND

Height 6 ft
